ELIGIBILITY DETERMINATION FOR REDEVELOPMENT APPOMATTOX TRAILER COURT

I. SUMMARY ANALYSIS OF EXISTING CONDITIONS

The following analysis of existing conditions in the designated Appomattox Trailer Court Redevelopment Area was used as the basis for identifying the extent of blight and deterioration of this area as eligible for redevelopment under Chapter I, Article 7, Title 36, Code of Virginia.

Derivation of Area Conditions

1. Land Use
Land use data were obtained from field surveys conducted of the Redevelopment Area by K.W. Poore and Associates, Inc., Community Development Consultants, in January 2006 and Dunbar, Milby Williams, Pittman & Vaughn PLLC, Consulting Structural Engineers in March 2007. The City of Hopewell Department of Development provided additional property and inspection information.
2. Environmental Assessment
Environmental data were obtained from field assessments conducted by K.W. Poore and Associates, Inc., Community Development Consultants, in January 2006 and follow-up assessments in April 2007.
3. Building Conditions
Exterior structural evaluations of exterior conditions of physical improvements in the Redevelopment Area were conducted by Dunbar, Milby, Williams, Pittman and Vaughn, Consulting Structural Engineers, in March 2007.

Summary of Project Area Characteristics

The REDEVELOPMENT AREA consists of 6.65 acres on one (1) parcel with approximately 30% of the area built up. The Building Conditions Map dated April 2007 delineates the project area boundaries.

Existing Land Use

The existing land use consists of thirty-one (31) single-family residential units (mobile homes) on one (1) parcel totaling 6.65 acres. A majority of the mobile homes is in deteriorated condition and constitutes a blighting influence on the area.

Table 1. EXISTING LAND USE
Appomattox Trailer Court Redevelopment Area
City of Hopewell, Virginia

Land Use Classification	Acreage	Percent of Total Area
Single-Family: Mobile Homes	6.65	100%
TOTAL AREA	6.65	100%
SOURCE: K.W. Poore & Assoc, Sept. 2006		

Environmental Assessment

The Redevelopment Area suffers from numerous factors that contribute to its deteriorated state. Poor housing conditions, poor site design and layout, deficient site drainage, incompatibility of land uses, accumulations of debris and vegetative overgrowth contribute to the blighted characteristics of the area.

Building Conditions

All residential units within the project area are mobile homes. Many units have out-buildings and in varying states of deterioration. As a whole, the mobile homes exhibit failing roofs, missing and broken skirting, cracked and broken windows, deteriorated appurtenances, unstable foundations, and accumulations of debris in and around the units.

Table 2. EXISTING BUILDING CONDITIONS
Appomattox Trailer Court Redevelopment Area
City of Hopewell, Virginia

Building Conditions	Number of Buildings	Building Type	% Total of Buildings
Standard – <i>Good Condition or in need of minor repairs</i>	0	Mobile Home	0.0%
Minor Deficiencies – <i>Minor Defects beyond regular maintenance</i>	5	Mobile Home	16.1%
Intermediate Deficiencies – <i>Significant Defects potentially warranting clearance</i>	24	Mobile Home	77.4%
Major Deficiencies – <i>Unsuitable for Rehab / Substantial Reconstruction or clearance required</i>	2	Mobile Home	6.5%
SOURCE: Dunbar, Milby, Williams, Pittman and Vaughn, Consulting Structural Engineers, March 2007			

II. ELIGIBILITY REQUIREMENTS FOR REDEVELOPMENT

This eligibility report contains information necessary to make a determination of eligibility under Title 36, Code of Virginia for the Redevelopment Area as a redevelopment project under state and local law. The eligibility determination was completed in March 2007. A Redevelopment Plan for the eligible area is subject to final adoption by the Hopewell Redevelopment and Housing Authority and the Hopewell City Council. It must be implemented within five (5) years of the date of adoption as required by state redevelopment law.

State Requirements

In order for an area to be designated as a state-recognized Redevelopment Area, it must be eligible as specified in the Virginia Housing Authority Law, Code of Virginia, Title 36, Article 7 that finds:

1. “there exist(s) in many communities within this Commonwealth blighted areas which impair economic values and tax revenues, cause an increase in and spread of disease and crime, and constitute a menace to the health, safety, morals and welfare of the residents of the Commonwealth;
2. the clearance, replanning, rehabilitation and reconstruction of such blighted areas and the sale or lease of land and the acquisition and operation of residential housing units for low, moderate and middle income persons within such areas for redevelopment in accordance with locally approved Redevelopment Plans are necessary for the public welfare and are public uses and public purposes;
3. public money may be spent and private property acquired by purchase or the power of eminent domain and are governmental functions of grave concern to the Commonwealth”; and
4. land may be assembled through eminent domain to create “sound and wholesome development in accordance with a Redevelopment Plan” and the use of public money for such activities is a public purpose and use.

III. CRITERIA SUPPORTING REDEVELOPMENT ELIGIBILITY

The following criteria were developed in consideration of Virginia requirements for redevelopment. In each instance, consideration was given to structural and environmental deficiencies and other blighting influences. Structural and Environmental Evaluations are based on the following criteria.

Structural Criteria

Structural Evaluations (Exterior Building Surveys)

Building data were divided into categories relating to the structure, sanitary facilities, mechanical systems (utilities), and relationship with surrounding or adjacent uses. Structural elements were inspected for defects and graded in accordance with the severity of deterioration. The Structural Evaluation Forms are provided as an appendix.

1. Major Deficiencies: structures with defects that are unsuitable for rehabilitation and warrant substantial reconstruction or clearance
2. Intermediate Deficiencies: structures with significant defects that may require clearance
3. Minor Deficiencies: structures with minor defects beyond regular maintenance
4. Sound: structures in good condition or in need of only minor repairs

Environmental Criteria

Identification of Blighting Influences (Environmental Assessment)

1. Incompatible uses or use relationships: mixed inharmonious land use, conversion or improvement, inefficient and undesirable though possible structurally sound; varies with use.
2. Obsolete building types: not suitable for conversion or improvement, inefficient, and undesirable though possibly structurally sound; varies with use
3. Inadequate public utilities and community facilities: indeterminate water line size and community septic system of undetermined soundness contributing to unsatisfactory living conditions
4. Deficient streets: inadequate pavement, poor surface conditions, poor storm drainage
5. Overcrowding or improper location of buildings on the land: mobile homes placed on pads approximately 10' x 30'; varied orientation to the road
6. Adverse environmental deficiencies: accumulations of debris, poor storm drainage, erosion, vegetative overgrowth

IV. STATEMENT AND DATA ESTABLISHING THE AREA MEETS VIRGINIA STATUTORY REQUIREMENTS

An area is eligible for clearance and redevelopment under Virginia statutes when the designated area as a whole is blighted or deteriorated and the remaining property either suffers from factors causing blight or from conditions which prevent proper development to implement the redevelopment plan. These conditions are defined as follows:

- I. Blighted or deteriorated area or areas with buildings or improvements which be reason of:
 - a. Dilapidation
 - b. Obsolescence
 - c. Overcrowding
 - d. Faulty arrangement or design
 - e. Lack of ventilation, light, and sanitary facilities
 - f. Excessive land coverage
 - g. Deleterious land use
 - h. Obsolete site layout

or any combination of these and other factors, are detrimental to the safety, morals or welfare of the community.
2. Factors causing blight
3. Conditions preventing proper development of property
 - a. Condition of title
 - b. Diverse ownership of property to be assembled
 - c. Faulty street or lot layout
 - d. Other considerations preventing proper development

Factors Contributing to Blight and Blighting Conditions in the Redevelopment Area

This area meets the Virginia statutory requirements as 83.9% of the structures found in the Redevelopment Area is blighted or deteriorated by reason of building dilapidation and significant environmental deficiencies and is detrimental to public welfare and health. The following summarizes the data that supports this finding:

Structural Evidence

The structural engineer found that twenty-six (26) of the thirty-one (31) structures (83.9%) exhibited intermediate to major exterior deficiencies based on accepted substandardness criteria. No structures were found to be in sound condition.

Environmental Evidence

In addition, field assessments were conducted by K.W. Poore and Associates, Inc., Community Development Consultants. Specific deficiencies in the Redevelopment Area

are found to either be blighting influences or contributing to blight. The findings are summarized below:

1. **Poor design, faulty arrangement of structures:** excessive and inappropriate density, poor topography and insufficient grading, obsolescence, overcrowding and site deficiencies.
2. **Abandoned and dilapidated structures:** Vacant structures in deteriorated condition, accumulations of debris, abandoned vehicles
3. **Poor site maintenance:** Gravel road surface with numerous large pot holes, broken pavement, vegetative overgrowth, and deteriorated structures

V. CONCLUSION

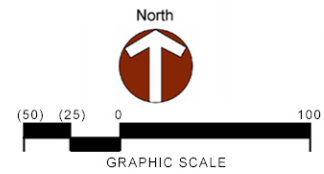

While individual instances of blight may not rise to the level of severe, the totality of the structural and environmental conditions leads to the conclusion of a blighted area eligible for redevelopment under Title 36, Code of Virginia.

SUBSTANDARDNESS CRITERIA

Plan for Redevelopment and Conservation – B Village

Hopewell, Virginia

CRITERIA FOR CLASSIFYING BUILDINGS STRUCTURALLY SUBSTANDARD REQUIRING CLEARANCE

A. Structural Deficiencies

1. *Defects in structural elements.*

The determination that a structure requires clearance because of defects in structural elements results from the application of criteria at two levels:

The first level includes defects in vital structural elements (listed below) which render the structure inadequate, detrimental or unsafe with relation to its function and use. Four degrees of severity of defect have been recorded: Major intermediate, minor, and standard. Major defects in any one of the following vital elements have been considered grounds for rating the structure "requiring clearance":

EXTERIOR

- Foundation - Sagging, sinking or with a critical amount of loose or missing material or open pier.
- Walls - Out of plumb, bulging, or with a critical amount of loose or missing material, rot or open cracks.
- Roof - Sagging, rotted or broken structure, severe leaking with a critical amount of rotting or missing roofing.

INTERIOR

- Floors - Irregular, sagging or sinking floors or floor joists. Critical amount of missing material. Rotted or deteriorated floor joists.
- Walls - Rotted, badly cracked or out of plumb walls (particularly bearing walls). Extensive settling or deterioration of walls.

The second level includes a combination of defects which are either less critical than those listed above or relate to less important structural members (listed below), or both, and which are sufficient in the aggregate to cause the entire structure to be rated as "requiring clearance" under this combination of defects in structural elements. At least two intermediate defects must relate to the above listed vital elements and at least two other intermediate but less critical defects listed below.

EXTERIOR

- Chimney - Out of plumb or deteriorated to a potentially dangerous condition creating a fire hazard or structural weakness.
- Paint - Badly neglected, scaled, cracked, missing.
- Trim - Rotten, substantial loose and/or missing material.
- Gutters and Downspouts - Rotted, substantial loose and/or missing material (most severe rating can only be minor).

EXTERIOR AND INTERIOR

- Porches, Stairs and Steps - Poor condition, sagging, loose, sinking or shaky with missing material, rotting or with structural defects, weakened balusters or railings.

INTERIOR

- Ceilings, Joists, Beams - Cracked, substantial loose or missing material, warped and/or rotted.
- Windows - Rotted, loose or poorly fitting frames, numerous broken or missing panes.
- Doors - Rotted or deteriorated frames, ill-fitting or deteriorated doors, missing hardware.
- Basement Floors and Walls - Cracked, substantial loose, missing material and/or excessive dampness.

In addition a structure may be rated as structurally substandard because of:

2. *A combination of deficiencies in facilities and utilities.*

In order for a structure to be classified as "structurally substandard to a degree requiring clearance because of deficiencies in utilities or facilities, at least two major deficiencies or four intermediate deficiencies must be found to exist in items list below.

Water	Bath or Shower	Heat
Electric Fixtures	Toilet	Plumbing
Electric Service	Kitchen Sink	Bath or Shower
Elevator (if multi-story building)		
Fire Escape (if multi-story building or needed for dual egress).		

3. *Other Rated Items.*

If deficiencies exist in dual egress or functional obsolescence they are rated and included in Item 4 of the below-listed criteria for rated buildings.

4. *The classification of a principal building as "requiring clearance" is made on the basis of the following criteria:*

- a. One (1) first level major deficiency.
- b. Four (4) intermediate deficiencies in the first and second levels with no less than two (2) of these intermediate deficiencies being in the first level.
- c. Two (2) major deficiencies or four (4) intermediate deficiencies in utilities and facilities.
- d. 1) Two (2) deficiencies in any one level, or a combination of two levels, but none may be from the first level; or 2) One (1) major deficiency in any but the first level in addition to three (3) intermediate deficiencies in any level, or a combination of any levels; or 3) any first (5) intermediate deficiencies.

Note: Environmental factors are considered whenever a property is scheduled for acquisition to remove a blighting influence.

Buildings which do not "require clearance" based on the aforementioned criteria, but that nevertheless have significant defects, are classified as "buildings with intermediate deficiencies not to an extent requiring clearance". Buildings in good condition or in need of minor repairs have been appropriately classified as "building with no recorded deficiencies" or "buildings with minor deficiencies".

B. Blighting Influences

- Overcrowding or Improper location of structures on the land: structures without property street access, residences located to the rear of other structures on the same lot, inadequate distance between structures, excessive land coverage.
- Excessive dwelling unit density: variable but essentially the inability of land to provide essential light, air, and living space for all residential requirements - privacy, service, access, parking.
- Incompatible uses or use relationships: mixed inharmonious land use, conversions of structures or parts of structures to incompatible uses, use of land or structures which have a depreciating effect on nearby property.
- Obsolete building types: not suitable for conversion or improvements, inefficient and undesirable though possibly structurally sound. Varies with use.
- Inadequate street layout: extremely narrow, excessive grades, bad jobs, dead ends poor alignment, unsafe or badly congested streets.
- Other equally significant environmental defects or deficiencies such as: Inadequate utilities, inadequate community facilities, refuse accumulation, infestation, flooding and topographical difficulties (particularly related to public health problems), etc.
Structures with, or related to, one or more of the above mentioned blighting influences and which are in conflict with redevelopment objectives for the area may be designated for clearance.
